SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	04/11/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

## Office Action Summary

**Application No.**

10/823,787

**Applicant(s)**

HENRY ET AL.

**Examiner**

Sameh H. Tawfik

**Art Unit**

3721

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 28 February 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1,3-21 and 23-29 is/are pending in the application.
- 4a) Of the above claim(s) 29 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,3-21 and 23-28 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 9-11, 15-21, and 23 rejected under 35 U.S.C. 102(b) as being anticipated by Yates (U.S. Patent No. 5,715,648).

Yates discloses a high-speed envelope transport and packing system comprising: a conveyor for conveying an open envelope having a front wall, a back wall and a flap extending away from the front wall (Figs. 3 and 4; via rollers 28 and 30); packing station for inserting an object into the conveyed open envelope (Figs. 3 and 4); and a bending member disposed in the packing station (Figs. 2, 5, and 6; down fingers 60 and 62 and flapper paddles 68 and 70); wherein the bending member is configured to impart a bend in the conveyed open envelope by displacing a center portion of the conveyed open envelope (Figs. 5 and 6; via members 60 and 62 bend by displacing a center portion of the envelope relative to widthwise) and to maintain a bend in the conveyed open envelope until the open envelope is gripped by a gripping device (Figs. 3-6; via by engaging the feeding rollers 150 and 152 and by moving upward the stop 54 could be consider as gripping device; column 2, lines 65-67 and column 3, lines 1-4) in such a manner as to provide access to an interior of the open envelope or until an object is at least partially inserted into an interior of the open envelope (Figs. 3 and 4); wherein the bend along the center portion of the conveyed open envelope includes the flap, front wall and back wall (Figs. 1, 2, 5, and 6; via

Art Unit: 3721

by using pushing fingers 60 and 62 the flap and back wall bend down and by such force the front wall gets bended upwardly), wherein a joint between the flap and the open envelope is perpendicular to the conveyor, see for example (Figs. 5 and 6; via the joint between the flap and the back wall is perpendicular to conveying rollers 44, 46, 48, and 50), and the bending member is configured to bend the open envelope about an axis that is substantially perpendicular to a joint between the flap and the open envelope, see for example (Figs. 1, 2, 5, and 6).

Regarding claim 3: wherein the bending member comprises a rail disposed along a direction of conveyance of the open envelope (Figs. 1 and 2; via the rods/rails of 60 and 62) in a position substantially corresponding to a center line of the conveyed open envelope with respect to a widthwise direction of the conveyed open envelope (Figs. 1 and 2).

Regarding claims 9 and 10: wherein a height of the rail is less than about 5.0 mm and/or between about 1.25 mm and 1.75 mm., see for example (Figs. 1 and 2).

Regarding claim 11: wherein the bending member comprises paired rails disposed along a direction of conveyance of the open envelope (Figs. 1 and 2; via the paired rails of 60 and 62).

Regarding claim 15: wherein a height of the rails is less than about 5.0 mm and/or between about 1.25 and 1.75 mm. see for example (Figs. 1 and 2).

Regarding claim 17: wherein the bending member comprises a channel disposed along a direction of conveyance of the open envelope in a position substantially corresponding to a central region of the conveyed open envelope with respect to a widthwise direction of the conveyed open envelope (Figs. 1 and 2; via the space between the two rails/fingers 60 and 62 could be considered as channel).

Art Unit: 3721

Regarding claim 18: wherein a width of the channel is greater than about half of a width of the conveyed open envelope with respect to the widthwise direction of the conveyed envelope, see for example (Figs. 1 and 2; via the space between the two rails/fingers 60 and 62 could be considered as channel).

Regarding claim 19: wherein a width of the channel is greater than about three-quarters of a width of the conveyed open envelope with respect to the widthwise direction of the conveyed open envelope (Figs. 1 and 2; via the space between the two rails/fingers 60 and 62 could be considered as channel).

Regarding claim 20: wherein the bending member comprises paired channels disposed along a direction of conveyance of the open envelope in positions substantially equidistant to a center line of a conveyed open envelope with respect to a widthwise direction of the conveyed open envelope (Figs. 1 and 2; via the distance between 60 and the end edge of 68 could be seen as another channel and the same of the distance between 62 and end edge of 70), and wherein the paired channels are disposed to receive widthwise ends of the conveyed open envelope.

Regarding claim 21: a bending member configured to bend a conveyed envelope about the z-axis during conveyance of the conveyed envelope to increase the moment of inertia of the conveyed envelope about the z-axis above a corresponding moment of inertia of the conveyed envelope in a flat state (Figs. 1, 2, and 6; via moving the flapped envelope in the z-axis).

Regarding claim 23: wherein the bending member comprises at least one of a center rail, a plurality of rails (via rods of fingers 60 and 62), a curved plate (via 68 and 70), a center channel (via the distance between the fingers 60 and 62), and a plurality of channels disposed along at least one side of a conveyed envelope, and wherein the bending member is configured to

Art Unit: 3721

displace a central portion of the conveyed envelope by less than about 5.0 mm relative to widthwise ends of the conveyed envelope, see for example (Figs. 1, 2, 5, and 6).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-8, 12-14, and 24-28 rejected under 35 U.S.C. 103(a) as being unpatentable over Yates (U.S. Patent No. 5,715,648) in view of Haas et al. (U.S. Patent No. 4,798,040).

Yates does not disclose that a plurality of arranged vacuum ports on the rail. However, Haas discloses similar envelope packing system comprising the use of plurality of vacuum ports (Fig. 7; via 650A-650D).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Yates's bending member by using arranged vacuum means, as suggested by Haas, in order to control the conveying of the envelope.

Regarding claims 5 and 13: Yates discloses that wherein the rail (via rods extending out of 60 and 62) disposed along a direction of conveyance of the open envelope is disposed proximal to a side of the conveyed open envelope having the flap, see for example (Figs. 1 and 2).

Regarding claims 6, 8, and 14: Yates discloses that wherein a front edge of the rail, relative to the direction of conveyance of the open envelope, is chamfered or curved (Figs. 1, 2, and 6; via the bending members 60 and 62 positioned by the front edge of the rail).

Art Unit: 3721

Regarding claims 24-28: Yates does not disclose that a vacuum plate provided in the packing station; wherein the vacuum plate is configured to bias an envelope and an envelope flap against the vacuum plate at least during insertion of an insert into the conveyed open envelope. However, Hass, discloses similar envelope packing system comprising a vacuum plate provided in the packing station with plurality of vacuum ports; wherein the vacuum plate is re-movably attached to the packing station and positioned within a central region of the packing station and configured to bias an envelope and an envelope flap against the vacuum plate at least during insertion of an insert into the conveyed open envelope (Figs. 1 and 7; via vacuum means 650A-650D).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Yates's insertion station by using a vacuum plate provided in the packing station with plurality of vacuum ports; wherein the vacuum plate is removably attached to the packing station and positioned within a central region of the packing station and configured to bias an envelope and an envelope flap against the vacuum plate at least during insertion of an insert into the conveyed open envelope, as suggested by Haas, in order to control the conveying of the envelope.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1, 3-21, and 23-28 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Art Unit: 3721

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sameh H. Tawfik whose telephone number is 571-272-4470. The examiner can normally be reached on Tuesday - Friday from 9:00 AM to 7:30 PM.

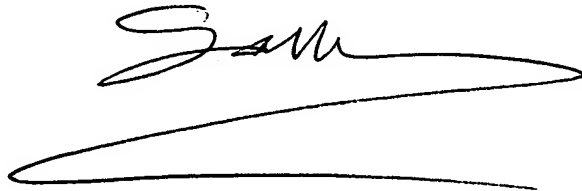

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on 571-272-4467. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 3721

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
